

# NEXT WAY COLLEGE INTERNATIONAL

## Premium Institutional Website Product & Development Blueprint

React + Supabase | Responsive | SEO-Ready | Conversion-Focused

### PROJECT VALUE

Target project value: LKR 100,000. The specification is intentionally designed to make the delivered website feel substantially more valuable than a basic brochure site through strong UX, programme discovery, admissions conversion, content structure, SEO foundations, performance and a maintainable Supabase-backed content model.

*Prepared as an end-to-end build specification*

# 1. Executive Summary

This document defines the complete product, UX, visual, technical, content, SEO and deployment specification for a premium website for Next Way College International. The goal is not to produce a generic college website. The goal is to create a digital flagship that builds trust with prospective students and parents, presents programmes clearly, converts enquiries into admissions conversations, and gives the institution a professional platform that can grow as its academic portfolio expands.

The website should visually compete with the best elements observed in the reference institutions supplied for this project: strong hero messaging and programme discovery, clear institutional credibility, structured schools/programme categories, news and events, student testimonials, partner/awarding-body presentation, and admission guidance.

## CORE EXPERIENCE PRINCIPLE

A student should be able to enter from Facebook or Google, understand what Next Way offers within seconds, find a suitable programme in under a minute, verify key information, and submit an enquiry without friction.

## Project Objectives

- Create a premium, elegant and trustworthy higher-education brand experience.
- Make programmes the centre of the website rather than treating them as secondary information.
- Convert visitors into enquiries through Apply Now, Request Information and WhatsApp CTAs.
- Create an SEO-friendly page architecture for programme and location-based searches.
- Provide a clean Supabase-backed content model so programmes, news, events and enquiries can be managed without rewriting the frontend.
- Make the site fully responsive across mobile, tablet, laptop and large desktop screens.
- Deliver a maintainable React codebase with reusable components and clear folder ownership.
- Create a foundation that can later support student portals, payments, LMS links or a full admissions CRM without rebuilding the public website.

# 2. Reference Research & Design Lessons

The supplied reference sites were reviewed for information architecture, content hierarchy, conversion patterns and institutional presentation. The objective is to learn from their strengths—not copy their visual identity.

| Reference            | Useful pattern to adopt                                                                                                                       | Lesson for Next Way                                                                                        |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|
| SLIIT / Northern Uni | Campus positioning, degree/programme visibility, facilities, industry connection and strong regional positioning.                             | Present Next Way as a serious higher-education destination with clear local relevance and career pathways. |
| ESOFT                | Strong hero statement, institutional story, statistics, schools, course catalogue, news/events and testimonials.                              | Use a rich but organised homepage with schools/categories, programme discovery and proof sections.         |
| BCAS                 | Very clear Apply Now CTA, programme/partner blocks, news, institutional credibility and structured admissions guidance.                       | Make admissions conversion a first-class feature, not a footer link.                                       |
| IDM Nations Campus   | Clear 'study locally/progress globally' positioning, course search, quality/recognition sections, testimonials and student journey messaging. | Use a simple student journey, programme search and verified credibility claims.                            |

**IMPORTANT**

All recognition, accreditation, awarding-body, partner, ranking, graduate-employment and student-number claims must be verified by Next Way before publishing. The website must never invent institutional credentials simply to look more impressive.

## Reference observations

- ESOF prominently combines institutional positioning, programme discovery, schools, latest news, events and testimonials, showing how a large education brand turns a homepage into a complete discovery funnel.
- BCAS places 'Apply Now' and admissions guidance close to the top of the journey and asks for qualification/programme/contact information in its enquiry flow.
- IDM combines programme search with institutional trust, quality assurance, student support, testimonials and a clear progression narrative.
- SLIIT's Northern Uni material demonstrates the value of regional positioning, programme lists, facilities and industry-linked opportunities for a Jaffna-focused higher-education audience.

## 3. Brand & Visual Direction

### Brand Positioning

Recommended positioning:

**Next Way College International** — a modern, career-focused higher-education institution that helps students move from learning to professional opportunity.

### Recommended Brand Promise

#### PRIMARY MESSAGE

Learn Today. Lead Tomorrow.

Alternative supporting line: “Build the knowledge, skills and confidence to move your future forward.”

Do not lock the institution into a slogan until management approves the final brand language.

### Premium Colour System

| Token         | Hex     | Use                                                             |
|---------------|---------|-----------------------------------------------------------------|
| Primary Navy  | #0B1F3A | Header, hero overlays, major headings, footer, premium sections |
| Deep Blue     | #123C69 | Secondary brand surfaces, links, buttons                        |
| Academic Gold | #C9A227 | Small accents, dividers, badges, active states                  |
| Ice           | #F4F7FA | Section backgrounds and cards                                   |
| White         | #FFFFFF | Main canvas and contrast                                        |
| Slate         | #64748B | Secondary text                                                  |
| Charcoal      | #1F2937 | Body text                                                       |
| Success       | #15803D | Success messages only                                           |
| Error         | #B91C1C | Validation/error states only                                    |

Colour rule: navy should establish trust, gold should signal premium detail, and white/ice should preserve space. Gold must not be used as a dominant background.

## Typography

- Headings: Plus Jakarta Sans or Manrope, 600–700 weight.
- Body/UI: Inter, 400–600 weight.
- Use a maximum of two font families.
- Desktop H1: approximately 52–72px depending on viewport; mobile H1: 34–42px.
- Body: 16–18px desktop; 15–17px mobile; line-height around 1.55–1.7.

## Visual Language

- Editorial photography of real students, lecturers, classrooms, workshops and campus life should dominate over generic stock photography.
- Use generous whitespace and strong alignment grids.
- Cards should have restrained radius (12–18px), subtle borders and minimal shadows.
- Use large photography with dark navy gradients when text overlays images.
- Use thin gold rules, small eyebrow labels and refined iconography for premium details.
- Animations should be subtle: fade-up, reveal, hover elevation and number counters.
- Avoid excessive gradients, bouncing elements, carousels that move too fast, glassmorphism everywhere, or decorative effects that reduce academic credibility.

## 4. Information Architecture / Sitemap

| Route             | Purpose                                                       | Priority    |
|-------------------|---------------------------------------------------------------|-------------|
| /                 | Institutional first impression and conversion funnel          | Critical    |
| /about            | Mission, vision, story, leadership and institutional identity | High        |
| /programmes       | Search/filter all programmes                                  | Critical    |
| /programmes/:slug | Individual programme landing page                             | Critical    |
| /schools          | Academic categories/schools                                   | High        |
| /admissions       | Application process, requirements and enquiry                 | Critical    |
| /student-life     | Campus life, activities, facilities and support               | Medium      |
| /news             | News and institutional updates                                | High        |
| /news/:slug       | Individual news article                                       | Medium      |
| /events           | Upcoming/past events                                          | Medium      |
| /events/:slug     | Event detail                                                  | Medium      |
| /contact          | Contact details, map and enquiry                              | Critical    |
| /privacy-policy   | Privacy and data handling                                     | Required    |
| /terms            | Terms and website conditions                                  | Recommended |
| /sitemap.xml      | Search engine discovery                                       | Required    |
| /robots.txt       | Crawler guidance                                              | Required    |

## 5. Homepage — Premium Section-by-Section Specification

### 5.1 Announcement / Utility Bar

Optional thin strip for intake deadlines, hotline or important notices. Example: “Applications Open for the 2026 Intake • Enquire Today”. Make dismissible on mobile.

## 5.2 Header

Logo, About, Programmes, Schools, Admissions, Student Life, News & Events, Contact. Primary CTA: Apply Now. Mobile: compact menu plus persistent Apply button.

## 5.3 Hero

Full-width premium campus/student image. Eyebrow: NEXT WAY COLLEGE INTERNATIONAL. H1 focused on future and education. Supporting copy. CTAs: Explore Programmes and Apply Now. Add subtle trust line beneath CTAs.

## 5.4 Trust / Proof Strip

Use only verified facts: programme count, years of operation, student count, partner count or other approved statistics. If figures are unavailable, use qualitative trust points instead.

## 5.5 Discover Programmes

Programme cards with category, level, duration, study mode and CTA. Add View All Programmes.

## 5.6 Why Next Way

Four to six reasons with concise proof: career-focused learning, qualified faculty, practical learning, flexible study, student support, progression pathways.

## 5.7 Featured Programme

One hero programme, especially the new BSc in Information Technology, with a strong visual and a direct Explore Programme CTA.

## 5.8 Academic / Awarding Partners

Logo wall with programme-specific labels. Never imply a partner relationship beyond what is officially documented.

## 5.9 Student Journey

Discover → Choose → Apply → Learn → Grow. A simple visual flow that reduces uncertainty for first-time applicants.

## 5.10 Campus / Student Life

Real photography: classrooms, labs, events, workshops, presentations, student interactions. CTA to Student Life.

## 5.11 News & Events

Latest 3–6 cards, automatically pulled from Supabase. Include dates and categories.

## 5.12 Testimonials

Real student testimonials with permission. Include programme name and graduate/student status where approved.

## 5.13 Admissions CTA

Large premium navy/gold section: “Ready to take the next step?” with Apply Now and WhatsApp buttons.

## 5.14 Footer

Logo, short institutional statement, navigation, programme links, admissions, contact, social links, privacy, terms and copyright.

## 6. Programme Experience

The programme catalogue is the commercial heart of the website. It must feel like a modern course discovery platform.

### Programme Listing

- Search by programme name or keyword.
- Filter by school/category.
- Filter by qualification level.
- Filter by study mode.
- Optional filter by duration/intake.
- Sort by featured/newest where useful.
- Each card: image, title, qualification, duration, mode, short value proposition and Explore button.

### Programme Detail Template

- Hero: programme title + qualification + strong CTA.
- Quick facts: duration, credits where applicable, mode, medium, intake, location.
- Why this programme?
- Programme overview.
- Modules / curriculum.
- Learning outcomes.
- Entry requirements.
- Assessment / learning method.
- Career opportunities.
- Progression / pathways.
- Fees and payment information (only verified/current).
- Awarding body / partner information (verified).
- Frequently asked questions.
- Related programmes.
- Application CTA.

#### **BSC INFORMATION TECHNOLOGY**

Because the BSc in Information Technology is a new programme and a major reason for this project, create a flagship programme page for it. It should feel more detailed and polished than a normal course card: career outcomes, curriculum, learning experience, technology stack/labs where accurate, lecturer/faculty introduction where approved, entry requirements, intake, fees, FAQs and a high-conversion application flow.

## 7. Admissions & Lead Conversion

Every high-intent page should offer at least one low-friction conversion action.

| CTA                 | Purpose                    | Destination                      |
|---------------------|----------------------------|----------------------------------|
| Apply Now           | High-intent applicants     | /admissions or application form  |
| Request Information | Students still researching | Enquiry modal/form               |
| Talk to Admissions  | Human support              | WhatsApp / phone                 |
| Explore Programme   | Information discovery      | Programme detail                 |
| Book a Consultation | Higher-touch leads         | Future booking module or enquiry |

## Application Form Fields

- Full name
- Mobile number
- Email
- Programme of interest
- Highest qualification
- Preferred study mode / intake
- Optional message
- Consent checkbox for privacy/data handling

Use progressive disclosure where possible. Do not ask for unnecessary personal information at first contact.

## 8. Supabase Backend & Database Specification

Supabase will provide PostgreSQL database, authentication for authorised staff, storage for media, and optional server-side functions for controlled workflows.

### Core Tables

| Table              | Purpose                                  | Key fields                                                                                                                 |
|--------------------|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| profiles           | Authorised staff profile                 | id, full_name, role, email, created_at                                                                                     |
| schools            | Academic school/category                 | id, name, slug, description, image_url, sort_order, is_active                                                              |
| programmes         | Programme catalogue                      | id, school_id, title, slug, level, duration, credits, mode, medium, overview, status, featured, seo_title, seo_description |
| programme_modules  | Module/curriculum items                  | id, programme_id, year_or_stage, code, title, credits, description, sort_order                                             |
| programme_fees     | Fee records                              | id, programme_id, intake, registration_fee, course_fee, instalment_note, currency, effective_from, is_current              |
| programme_partners | Programme-specific awarding/partner data | id, programme_id, partner_name, partner_type, logo_url, description, verified                                              |
| news               | News/articles                            | id, title, slug, excerpt, content, cover_image_url, published_at, author_id, status, seo_title, seo_description            |
| events             | Events                                   | id, title, slug, summary, description, start_at, end_at, location, image_url, registration_url, status                     |
| testimonials       | Approved testimonials                    | id, student_name, programme, quote, image_url, status, consent_confirmed                                                   |
| enquiries          | Admissions/contact leads                 | id, full_name, phone, email, programme_id, qualification, intake, message, source, status, created_at                      |
| media_assets       | Central media metadata                   | id, file_path, alt_text, caption, type, created_by                                                                         |
| site_settings      | Global settings                          | key, value_json, updated_at                                                                                                |

## Security / RLS

- Enable Row Level Security on every exposed table.
- Public users may SELECT only records marked active/published.

- Public users may INSERT enquiries but may not SELECT other enquiries.
- Only authorised staff roles may create/update/delete programmes, news, events and testimonials.
- Never expose the Supabase service-role key in the React client.
- Use environment variables for the public Supabase URL and anon key.
- Validate and sanitise form input server-side where possible.
- Add rate limiting/abuse protection for public enquiry submission.
- Use storage bucket policies so public media is readable while uploads are restricted to authorised users.

## 9. React Project Architecture — Clean Folder Structure

Recommended structure:

```

```

Architecture Rules

- Do not put Supabase queries directly inside large page components.
- Keep UI components presentational and services responsible for data access.
- Create reusable ProgrammeCard, SectionHeader, CTASection, TestimonialCard, NewsCard and Form components.
- Keep all SEO metadata generation in one predictable location.
- Use TypeScript if possible; if JavaScript is mandatory, enforce strong JSDoc/types discipline.
- Create shared design tokens instead of hardcoding colours and spacing throughout components.

10. UI Component System

| Component       | Behaviour                                                                                |
|-----------------|------------------------------------------------------------------------------------------|
| Navbar          | Transparent over hero, solid on scroll; desktop mega/menu only if needed; mobile drawer. |
| Button          | Primary navy/gold accent, secondary outline, text/link variants; keyboard focus visible. |
| ProgrammeCard   | Image, category, title, facts, hover state and CTA.                                      |
| ProgrammeFilter | Search + filter chips/selects with URL query state for shareable SEO-friendly discovery. |
| SectionHeader   | Eyebrow, H2, description and optional action.                                            |
| StatStrip       | Verified institutional statistics only.                                                  |
| PartnerLogoGrid | Monochrome/neutral presentation with accessible labels.                                  |
| TestimonialCard | Quote, name, programme, optional photo.                                                  |
| NewsCard        | Image, category, date, title, excerpt.                                                   |
| EventCard       | Date, title, location, CTA.                                                              |
| LeadForm        | Validation, loading state, success state and spam protection.                            |
| WhatsAppButton  | Floating on mobile and desktop, non-obstructive.                                         |
| Footer          | Navigation, contact, social, legal and newsletter/enquiry option.                        |
| Breadcrumbs     | Programme/news/event hierarchy; useful for SEO and navigation.                           |

11. Responsive Design Specification

| Breakpoint                                             | Design intent |
|--------------------------------------------------------|---------------|
| Confidential Project Specification • LKR 100,000 Scope |               |

|             |                                                                        |
|-------------|------------------------------------------------------------------------|
| < 480px     | Single-column, compact nav, large tap targets, no horizontal overflow. |
| 480–767px   | Mobile-first cards, stacked forms, 16px+ body text.                    |
| 768–1023px  | Tablet layouts, 2-column cards where appropriate.                      |
| 1024–1439px | Desktop grid, 3-column programme/news cards.                           |
| 1440px+     | Wide premium layout with max content width around 1280–1440px.         |

- All interactive targets should be touch-friendly.
- Images must use responsive sizes and modern formats such as WebP/AVIF where supported.
- Avoid fixed-height sections that break on small screens.
- Forms should become single-column on mobile.
- Sticky mobile CTA can be used carefully for Apply/WhatsApp without covering content.

## 12. SEO Specification

SEO must be designed into the information architecture, not added at the end.

### Technical SEO

- Unique title and meta description for every indexable page.
- Canonical URL on every indexable page.
- Clean, human-readable slugs.
- XML sitemap generated/maintained for programmes, news and events.
- robots.txt configured correctly.
- Open Graph and Twitter/X metadata.
- BreadcrumbList structured data where appropriate.
- Organization / EducationalOrganization structured data where appropriate.
- Course structured data for programme pages where supported and accurate.
- Article/Event structured data for news/events.
- Image alt text and descriptive filenames.
- Semantic HTML: one H1 per page, logical H2/H3 hierarchy.
- Fast Core Web Vitals: optimise LCP hero image, reduce JS, lazy-load below-the-fold media.
- No important content hidden behind client-only loading where search visibility matters.
- 404 page with useful navigation.
- Redirect strategy for changed slugs.

### Keyword Strategy

| Search intent       | Example keyword cluster                                | Target page                   |
|---------------------|--------------------------------------------------------|-------------------------------|
| Brand               | Next Way College International                         | Home                          |
| Local education     | college in Jaffna, higher education Jaffna             | Home/About                    |
| Programme           | BSc Information Technology Jaffna                      | BSc IT page                   |
| Programme discovery | IT degree Jaffna, computing degree Jaffna              | Programmes + Computing school |
| Diploma             | English diploma Jaffna, hospitality diploma Jaffna     | Individual programme pages    |
| Admissions          | degree admissions Jaffna, college admissions Sri Lanka | Admissions                    |

#### SEO WARNING

Do not stuff city names or keywords into every paragraph. Each programme should have genuinely useful, unique content. Local SEO should be supported by consistent institutional name, address, phone, map information and real campus/event content.

## 13. Content & Media Requirements

The quality of the photography will strongly influence whether the final site feels like a LKR 100,000+ institutional website.

| Asset                   | Recommended quantity               | Quality requirement                             |
|-------------------------|------------------------------------|-------------------------------------------------|
| Logo                    | 1 primary + optional white version | Vector/transparent PNG/SVG                      |
| Hero photos             | 3–5                                | High-resolution, real students/campus preferred |
| Campus/classroom photos | 10–20                              | Natural, bright, professional                   |
| Programme images        | 1 per programme                    | Consistent crop/aspect ratio                    |
| Faculty/lecturer photos | Approved staff only                | Consistent portrait style                       |
| Event/news photos       | Ongoing                            | Original institutional photos                   |
| Partner logos           | Verified partners only             | Permission/brand guidelines respected           |
| Student testimonials    | 5–10 initial                       | Written consent and accurate programme info     |

## 14. Content Management / Staff Update Capability

Within the LKR 100,000 scope, a lightweight protected content area can be designed rather than a full ERP.

- Staff login using Supabase Auth.
- Programme CRUD: add/edit/publish/archive.
- News CRUD.
- Event CRUD.
- Testimonial approval.
- Enquiry list with status: New, Contacted, Follow-up, Converted, Closed.
- Basic dashboard summary: new enquiries, published programmes, upcoming events.
- Role-based permissions: Admin and Editor.

### SCOPE CONTROL

If time becomes constrained, prioritise public website quality and enquiry capture first. The staff dashboard can launch as a minimal internal module and expand later.

## 15. Accessibility & Quality

- WCAG-conscious colour contrast.
- Keyboard navigation.
- Visible focus states.
- Meaningful alt text.
- Labels for every form input.
- Accessible error messages.
- No essential information communicated by colour alone.
- Reduced-motion support for users who request it.

- Proper button/link semantics.

## 16. Performance & Security

- Compress and resize images before upload.
- Use lazy loading for non-critical images.
- Preload only the hero asset/font that materially improves LCP.
- Avoid unnecessary animation libraries if CSS can handle the effect.
- Code-split large routes.
- Cache public programme/news queries appropriately.
- Protect admin routes.
- Never commit .env files or secrets.
- Use HTTPS in production.
- Validate all user input.
- Implement spam protection on public forms.
- Log failures without exposing sensitive data.

## 17. Analytics & Conversion Tracking

- Google Analytics 4 or an approved privacy-conscious alternative.
- Google Search Console.
- Track Apply Now clicks.
- Track WhatsApp clicks.
- Track programme detail views.
- Track enquiry form starts and successful submissions.
- Track traffic source/UTM parameters.
- Record enquiry source in Supabase when submitted.

## 18. Deployment & Environments

| Environment     | Purpose                         |
|-----------------|---------------------------------|
| Local           | Development with .env.local     |
| Staging/Preview | Client review before production |
| Production      | Official public website         |

- Recommended frontend deployment: Vercel or another reliable React-compatible host.
- Supabase project: production database with RLS enabled.
- Domain: official Next Way domain once confirmed.
- Create staging deployment for approval before DNS cutover.
- Configure domain, SSL, redirects, sitemap, robots and analytics before launch.
- Create a simple rollback procedure.

## 19. Delivery Timeline

| Phase | Work                                                           | Target     |
|-------|----------------------------------------------------------------|------------|
| 1     | Discovery, content audit, sitemap and requirements             | Days 1–2   |
| 2     | Wireframe + design system + homepage UI                        | Days 3–5   |
| 3     | React foundation + navigation + reusable components            | Days 6–8   |
| 4     | Programme catalogue + programme detail pages                   | Days 9–13  |
| 5     | About, admissions, student life, news/events/contact           | Days 14–17 |
| 6     | Supabase integration + enquiry workflow + protected staff area | Days 18–21 |
| 7     | SEO, performance, accessibility and analytics                  | Days 22–24 |
| 8     | Responsive QA, content QA, final polish and deployment         | Days 25–28 |

The schedule assumes content, logos, photos, programme information and institutional approvals are supplied on time.

## 20. LKR 100,000 Project Value Breakdown

| Workstream                        | Value (LKR) | Deliverable                                              |
|-----------------------------------|-------------|----------------------------------------------------------|
| Discovery + UX architecture       | 12,000      | Sitemap, user journeys, content hierarchy                |
| Premium UI/visual design          | 18,000      | Design system, homepage, programme UI, responsive states |
| React frontend development        | 25,000      | Reusable components + responsive pages                   |
| Supabase/backend integration      | 15,000      | Schema, RLS, queries, enquiry flow                       |
| Programme/content system          | 8,000       | Catalogue, detail templates, filters                     |
| SEO + performance + accessibility | 8,000       | Metadata, structured data, performance and QA            |
| Testing + deployment              | 5,000       | Cross-device QA, production launch                       |
| Handover + support                | 9,000       | Documentation, training and initial fixes                |
| TOTAL                             | 100,000     | Premium institutional website                            |

### VALUE PRESENTATION

The client is not paying LKR 100,000 for a set of HTML pages. They are receiving an institutional digital platform: brand presentation + programme discovery + admissions conversion + content architecture + SEO foundation + database-backed enquiry system + responsive engineering + deployment + handover.

## 21. Definition of Done / Acceptance Criteria

- All agreed pages are accessible from the navigation and footer.
- Every programme has a dedicated, shareable URL.
- Programme search/filtering works on mobile and desktop.
- Apply Now and WhatsApp CTAs work from all major conversion points.
- Enquiries are stored securely in Supabase.
- No public visitor can read another visitor's enquiry.
- Admin/editor permissions are enforced by RLS.
- All pages have appropriate title, description, canonical and social metadata.
- Sitemap and robots are live.
- No horizontal scrolling at supported breakpoints.
- Forms have validation, loading and success/error states.
- Images have appropriate alt text.
- No critical console errors.

- Production site uses HTTPS.
- Core pages are tested on current Chrome/Edge/Safari mobile/desktop combinations.
- Client receives source code, environment setup instructions, database schema/migrations and handover documentation.

## 22. Future Expansion Roadmap

| Phase | Future feature                                                           |
|-------|--------------------------------------------------------------------------|
| V2    | Full CMS, richer staff dashboard, automated email/WhatsApp notifications |
| V2    | Online application status tracking                                       |
| V2    | Online payments and receipts                                             |
| V3    | Student portal integration                                               |
| V3    | LMS / learning platform integration                                      |
| V3    | Certificate verification                                                 |
| V3    | Alumni portal                                                            |
| V4    | Admissions CRM and lead pipeline                                         |

## 23. Final Build Checklist

- ☐ Brand assets collected and approved
- ☐ Institutional profile text approved
- ☐ All programme data verified
- ☐ Fees and intake information verified
- ☐ Partner/awarding-body claims verified
- ☐ Campus address/contact details verified
- ☐ Real photographs collected
- ☐ Testimonials approved and consent confirmed
- ☐ Domain selected
- ☐ Supabase production project created
- ☐ RLS policies tested
- ☐ React project structured
- ☐ Responsive UI complete
- ☐ SEO metadata complete
- ☐ Analytics/Search Console configured
- ☐ Forms tested
- ☐ Mobile QA complete

- ☐ Desktop QA complete
- ☐ Accessibility QA complete
- ☐ Performance QA complete
- ☐ Production deployment complete
- ☐ Handover completed

## 24. Project Delivery Mindset

This website should be treated as a professional institutional contribution, especially because the BSc in Information Technology is being introduced as a new programme and the project is an opportunity to demonstrate technical and professional capability. The strongest way to create the 'wow' effect is not to add unnecessary effects; it is to make every detail feel intentional: excellent typography, clean spacing, verified content, polished programme pages, fast loading, easy enquiries, excellent mobile behaviour and a codebase that another developer can understand.

### FINAL PRINCIPLE

Build something the institution can proudly show to a parent, student, partner or visiting academic. Every page should answer one of three questions: “Who are you?”, “What can I study?”, or “How do I start?”

## 25. Research References

The following public websites were used as design/information-architecture references for this specification:

- SLIIT / Northern Uni — supplied reference: [sliit.lk/about/campus-and-centers/northern-uni](http://sliit.lk/about/campus-and-centers/northern-uni)
- ESOF Metro University — [esoft.lk](http://esoft.lk)
- BCAS Campus — [bcas.lk](http://bcas.lk)
- IDM Nations Campus International — [idmedu.lk](http://idmedu.lk)
- Next Way College International Facebook page — supplied by the client

Reference content was used for patterns and benchmarking only. Next Way-specific facts must be supplied and verified by the institution before publication.
